BDU-33 D/B

PRACTICE BOMBS

As Bombas Práticas BDU-33 D/B foram projetadas para treinamento a fim de simular as condições de lançamento das Bombas de uso geral. É utilizado cartucho de sinalização MK4-MOD3 para indicar local de impacto.

The BDU-33 Practice Bombs were designed for training in order to simulate the aunching conditions of the General Purpose Bombs. BDU-33 contains a signal cartridge (MK-4 MOD3) to indicate, with a white smoke, the ground impact point.

A BDU-50 (MK 82 inerte) são bombas de treinamento carregadas com inertes usadas para o treinamento de equipes de carga e técnicas de entrega de pilotos.

BDU-50 (MK 82 inert) are training bombs filled with inert materials used for training loading teams and pilots in delivery techniques.
